this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the C-terminal end of the encoded protein. Please note that these cDNA sequences are derived from the Ws or LAGY contain polymorphisms when compared to sequences from Col-0. Genset carried out the library production and sequencing of the 5' sequences, selection of clones, and sequence assembly. RIKEN Genomic Sciences Center (GSC) members carried out the collection and clustering of RAFL cDNAs (RAFL cDNA : 'RIKEN Arabidopsis Full-Length cDNA'): Seki, M., Narusaka, M., Ishida, J., Satou, M., Kamiya, A., Sakurai, T., Carninci, P., Kawai, J., Hayashizaki, Y. and Shinozaki, K.

The Salk, Stanford, PGEC (SSP) Consortium members carried out the sequencing and annotation of the RAFL cDNAs: Nguyen, M., Tripp, M., Southwick, A., Palm, C.J., Jones, T., Wu, T., Chen, H., Cheuk, R., Southwick, A., Palm, C.J., Jones, T., Wu, T., Chen, H., Chand, C.H., Dale, J.M., Deng, J.M., Hsuan, V.W., Lee, J.M.

The Salk, Stanford, PGEC (SSP) Consortium members carried out the sequencing and annotation of the RAFL CDNAs: Nguyen,M., Tripp,M., Southwick,A., Palm,C.J., Jones,T., Wu,T., Chen,H., Cheuk,R., Chan,M.M., Chang,C.H., Dale,J.M., Deng,J.M., Hsuan,V.W., Lee,J.M., Kim,C.J., Quach,H.L., Onodera,C.S., Shinn,P., Tang,C.C., Toroumi,M., Wong,C., Wu,H.C., Yamada,K., Yu,G., Yuan,S., Ecker,J., Theologis,A. and Davis,R.W.

Nguyen,M., (SSP/Stanford) and Seki,M. (RIKEN GSC) contributed equally to this work. Shinozaki,K. (RIKEN GSC) and Davis,R.W.

                                                                                                                                                                                                                                                                                                                                                                      Submitted (28-JUN-2000) Plant Gene Expression Center, 800 Buchanan St., Albany, CA 94710, USA
On Feb 11, 2000 this sequence version replaced gi:6693723.
The sequence is of BAC F14D7 from Arabidopsis thaliana chromosome
1. The sequence does not represent the sequence of the entire insert of this clone. It is shorter by 6954 by because we submit only the unique sequence of the clone. However, in order to facilitate the joining of overlapping clones in the future for creation of larger contigs, we provide small overlaps (200 bp) between overlapping sumbitted clones. The 5' end of this sequence overlaps by 200 bp to the 3' end of the sequence of the clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence of complete seq AC021198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 (bases 1 to 81513)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                             The invention relates to novel isolated lipid metabolism proteins (LMP) and encoding nucleic acids comprising a polynucleotide sequence encoding a polypeptide that functions as a modulator of seed storage compounds in a plant. The LMP nucleic acid is useful in producing transgenic plants with increased levels of seed storage compound, e.g. lipid, a fatty acid, a starch or a seed storage protein, as markers for specific regions of the genome and for evolutionary and protein structural studies. The present sequence represents an LMP nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                             New lipid metabolism proteins and nucleic acids, useful in producing transgenic plants with increased levels of seed storage compound, e. lipid, a fatty acid, a starch or a seed storage protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

```

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up component of the component of Altering plant characteristics, useful for producing plants for enzyme opharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or Claim 1; SEQ ID NO 2461; 134pp; English more proteins.

                                                                                                                                                                                                   The invention relates to nucleic acids (I) that hybridise under stringent conditions to any of 999 sequences (ABQ65427-ABQ66422) or their fragments. (I) are used to express the corresponding polypeptides (II) or to produce genetically modified plant cells or transgenic plants, which may have improved resistance to disease or stress, or altered metabolic/biosynthetic pathways (for production of commercial, nutritional or medicinal products), or generally any trait of interest, or can be used to screen for biologically active agents (e.g. fungicides, insecticides and antibiotics). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO at

The invention relates to a recombinant polynucleotide comprising any or the 58798 Cotton plant cDNA sequences mentioned in the specification. Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having improved property. Producing a plant thaving an improved property comprises transforming a plant with a recombinant construct comprising promoter region functional in a plant cell operably joined to a
                                                                                                                                                                   New recombinant nucleic acid molecules and polypeptides from Gossypium hirsutum, useful for producing plants with improved biological characteristics (e.g. improved plant cold or drought tolerance).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cotton; ss; plant; cold tolerance; growth rate; cell cycle pathway drought tolerance; plant disease resistance; galactomannan; lighir plant growth regulator; heat tolerance, herbicide tolerance; homologous recombination; extreme osmotic condition tolerance; pathogen resistance; pest resistance; yield; photosynthesis; seed
                                                                                                                                                                                                                                                                                                       (KOVA/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC with the property, and growing the transformed plant. The polypeptide is CC useful for improving plant cold tolerance, manipulating growth rate in CP plant cells by modification of the cell cycle pathway, improving plant CC plant cells by modification of the cell cycle pathway, improving plant CC plant tolerance, providing increased resistance to plant disease, CC producing galactomannan (or lighin or plant growth regulators), improving plant the rate of homologous recombination in plants, improving plant tolerance to extreme osmotic conditions or to pathogens or pests, improving yield by modification of photosynthesis, modifying seed oil or protein yield CC and/or content, improving yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, or improving yield by providing improved CC plant growth and development under at least one stress condition. The CC or in computer-based storage and analysis systems. The present sequence is a Cotton plant cDNA of the invention. NOTE: The sequence data for this CC patent did not form part of the printed specification, but was obtained CC in electronic format directly from USFTO at CC constructs of cormat directly from USFTO at CC constructs and color part of the printed specification, but was obtained CC plant growth grower available, the remaining 52213 cc polynucleotides and all 58798 protein sequences were not present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

The invention describes an isolated polynucleotide (I) comprising a nucleotide sequence that is one of 145 fully defined sequences of 221-3415 base pairs (bp), given in the specification, and/or its complements, reverse sequences, or sequences having 75, 90 or 95 % sequence identity to or that hybridise under stringent hybridisation conditions to one of the 145 sequences. The methods and compositions of
                                                                                                                                                                                                                                                                                                                                                                                                                                   programmed cell death; plant development; plant cell cycle; ATL2; Dnase; lls; lsdl; nucellin-like aspartic protease; annexin; prohib fen-like protein; rac2; retinoblastoma-related protein; SINA; TFII TEGT; xylogenic Rnase; pur-alpha; cyteine protease; RPP5-like prot gp 91 NADPH oxidase subunit; NPR-like protein; BAG-1; defender against cell death; lethal leaf spot; lesion stimulating seven in absentinia; transcription initiation factor;
                                                                                                                          altering the devel plant development.
                                                                                                  Claim
